Executive Summary

Sports Betting Platform (SBP) is a unique form of entertainment that combines the excitement of sports with the thrill of gambling. SBP is intended to exist in similar markets as other sports betting websites, but provides more data-backed informed odd calculations, and uncluttered, understandable, and easy-to-use operation pages. SBP softwares will be distributed as standalone applications for use on end-user hardware without network connectivity.

This document discusses processes for testing/verification of SBP.

Project Description

FootyBettor is looking to enter the sports gambling market. This market is saturated with platforms with clunky and complex operation pages, limited data availability, and implicit probability distribution. Sports Betting Platform (SBP) is FootBettor's creation which provides a solution to the problems which traditional betting platforms present which create difficulty in users being able to make informed decisions, place winning bets and succeed in the highly competitive sports betting industry. SBP allows for impressive data visualization of previous season team statistics and a smooth user experience for easily betting on the result of matches between sports teams. Users can create an account in which they navigate through the program, and view a balance which they can add to and which gets updated in relation to the return on their bets. SBP generates precise odds which are informed by a multitude of statistics used in calculations which optimize accuracy.

SBP is highly extendable and thus would have the potential to be able to support different applications such as a variation in the sport selected and type of bet available.

Additionally, SBP can support a graphical user interface, however, it does not necessarily require one to interact with the program. The program may be run completely via command line interface support. Currently, there does not exist a consummate sports gambling program which is for low-power and low-capability embedded platforms. SBP provides a resolution which supports such devices plus ones which have sufficient requirements to support a GUI, allowing for an increased potential pool of devices.

User Acceptance Testing Matrix

The test matrix enumerates tests to be conducted that verify the delivered system meets the requirements from the BRD. Following the matrix, the testing steps for each test are provided. Tests should be able to be completed without understanding of the internal technologies being used.

Feature Matrix

ID	Test Name	Comment	BRD ID
1	Windows Startup		s.1 , s.3 , e.2 , e.3 , e.9
2	Apple Startup		s.1 , s.3 , e.2 , e.3, e.9
3	Linux Startup		s.1 , s.3 , e.2 , e.3, e.9
4	Sign Up and Log into Account		e.4
5	Cash In/Cash Out Balance		e.10
6	View Team Stats		e.6
7	Bet on a Team		e.7 , e.8
8	Interface		ux.1 , ux.2
9	Error Message		ux.3 , e.1

Test Steps

1 - Windows Startup

Process

1. Refer to the user documentation of a Windows command prompt to clone a repository and compile Java files. Clone all the Java files and other required files into a local folder from the FootyBettor repository on GitHub.
2. Compile all the Java files in the command prompt and make sure everything is compiled without any error.
3. Start the program by running the Main.java file.
4. Verify that the initial CLI sign up/login dashboard is displayed.
5. Verify that a menu of options on the sign up/login dashboard is displayed.

6. Select the quit option.

Success

- The program runs without errors.
- The sign up/login dashboard displays accordingly.
- A menu of options for the user is displayed on the sign up/login dashboard.
- Program exits without error.

2 - Apple Startup

Process

1. Refer to the user documentation of Apple terminal to clone a repository and compile Java files. Clone all the Java files and other required files into a local folder from the FootyBettor repository on GitHub.
2. Compile all the Java files in the terminal and make sure everything is compiled without any error.
3. Start the program by running the Main.java file.
4. Verify that the initial CLI sign up/login dashboard is displayed.
5. Verify that a menu of options on the sign up/login dashboard is displayed.
6. Select the quit option.

Success

- The program runs without errors.
- The sign up/login dashboard displays accordingly.
- A menu of options for the user is displayed on the sign up/login dashboard.
- Program exits without error.

3 - Linux Startup

Process

1. Refer to the user documentation of Linux terminal to clone a repository and compile Java files. Clone all the Java files and other required files into a local folder from the FootyBettor repository on GitHub.
2. Compile all the Java files in the command line and make sure everything is compiled without any error.
3. Start the program by running the Main.java file.
4. Verify that the initial CLI sign up/login dashboard is displayed.
5. Verify that a menu of options on the sign up/login dashboard is displayed.
6. Select the quit option.

Success

- The program runs without errors.
- The sign up/login dashboard displays accordingly.

- A menu of options for the user is displayed on the sign up/login dashboard.
- Program exits without error.

4 - Sign Up and Log into Account

Process

1. Start SBP using all required Java documents.
2. Verify that SBP is running.
3. Click the sign up button.
4. Verify that the sign up window is open.
5. Verify that the user can type in username and password in the sign up window.
6. Sign up and quit the platform.
7. Start SBP using all required Java documents.
8. Verify that the user can type in username and password in the login window.
9. Verify that the user can log in SBP with the correct username and password.
10. Quit SBP.

Success

- The program runs without errors.
- SBP can store the new account information, username, and password.
- SBP can verify old accounts with the correct username and password.
- The program exits without errors.

5 - Cash In/Cash Out Balance

Process

1. Start SBP using all required Java documents.
2. Verify that SBP is running.
3. Log into the account with the correct username and password.
4. Go to the main dashboard and click on the cash in/cash out button.
5. Verify that a new window for entering the amount of money pops up.
6. Verify that the user can enter the amount of money to both cash in and cash out the balance.
7. Quit SBP.

Success

- The program runs without errors.
- SBP can display the correct user's balance.
- SBP can store and save the amount of money as per the user enters.
- SBP can update the balance.
- The program exits without errors.

6 - View Team Stats

Process

1. Login to SBP and go to the main dashboard.
2. Click on the view team stats button.
3. Verify that the team stats display the correct data.
4. Quit SBP.

Success

- The program displays the team stats dashboard without errors.
- The team displayed stats data that is consistent with the database.
- The program exits or tracks back to the dashboard without errors.

7 - Bet on a Team

Process

1. Start SBP using all required Java documents.
2. Verify that SBP is running.
3. Sign in SBP with the correct username and password.
4. Click the start betting button in the dashboard window.
5. Verify that the pick-a-game window is open.
6. Choose one game to bet on.
7. Verify that the odds window is open.
8. Verify that the odds information is correctly calculated.
9. Verify that the user can input a wager with the correct amount of money.
10. Verify that if the user inputs a wager that is larger than their current balance, SBP asks for recharge.
11. Verify that SBP gives the correct result and change the current balance.
12. Click the back button.
13. Verify that the user goes back to the dashboard window.
14. Quit SBP.

Success

- The program runs without errors.
- SBP can open the odds window.
- SBP can open the recharge window if users do not have enough money.
- SBP can calculate the correct odds based on the previous data.
- SBP can give a correct result and change the balance.
- SBP can let users return to the dashboard window.
- The program exits without errors.

8 - Interface

Process

1. Install SBP using the process in the user documentation.
2. Start the program using the process in the user documentation for the CLI operation.
3. Verify that the program is displayed on the console and that a user can sign in/ create an account and then navigate.

Success

- Program opens without errors using the CLI startup procedures.
- The program runs using CLI interfaces.
- Program exits without errors.

9 - Error Message

Process

1. Install SBP.
2. Start SBP.
3. Observe the human-readable error message.
4. Select the technical error report.
5. Observe a technician readable error report is produced.
6. Check that the program is no longer running.

Success

- Game produces a non-technical message.
- Game produces a more detailed technical error report.
- Game exits after the error message and report are produced.
